## LAB REPORT on

## **Database Management Systems (22CS3PCDBM)**

Submitted by

AMSHU G M (1BM21CS019)

in partial fulfillment for the award of the degree of BACHELOR OF ENGINEERING
in
COMPUTER SCIENCE AND ENGINEERING

B.M.S. COLLEGE OF ENGINEERING
(Autonomous Institution under VTU)
BENGALURU-560019
October-2022 to Feb-2023

### B. M. S. College of Engineering,

Bull Temple Road, Bangalore 560019
(Affiliated To Visvesvaraya Technological University, Belgaum)

Department of Computer Science and Engineering

#### **CERTIFICATE**

This is to certify that the Lab work entitled "Database Management Systems (22CS3PCDBM)" carried out by **AMSHU G M(1BM21CS019)**, who is bonafide student of **B. M. S. College of Engineering.** It is in partial fulfillment for the award of **Bachelor of Engineering in Computer Science and Engineering** of the Visvesvaraya Technological University, Belgaum during the year 2022. The Lab report has been approved as it satisfies the academic requirements in respect of a Database Management Systems (22CS3PCDBM) work prescribed for the said degree.

SHEETAL ASSISTANT PROFESSOR Department of CSE BMSCE, Bengaluru **Dr. Jyothi S Nayak**Professor and Head
Department of CSE
BMSCE, Bengaluru

#### 1.Insurance Database

PERSON (driver\_id: String, name: String, address: String)

CAR (reg\_num: String, model: String, year: int)

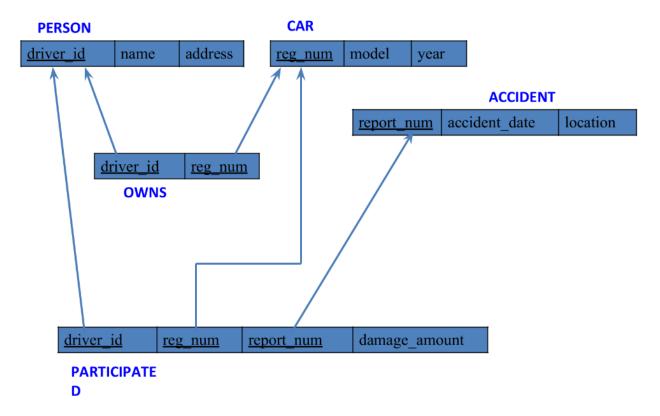

ACCIDENT (report\_num: int, accident\_date: date, location: String)

OWNS (driver\_id: String, reg\_num: String)

PARTICIPATED (driver\_id: String,reg\_num: String, report\_num: int,

damage\_amount: int)

- Create the above tables by properly specifying the primary keys and the foreign keys.
- Enter at least five tuples for each relation.
- Display the entire CAR relation in the ascending order of manufacturing year.
- Find the number of accidents in which cars belonging to a specific model (example 'Lancer') were involved.
- Find the total number of people who owned cars that were involved in accidents in 2008.

#### **Creating Database**

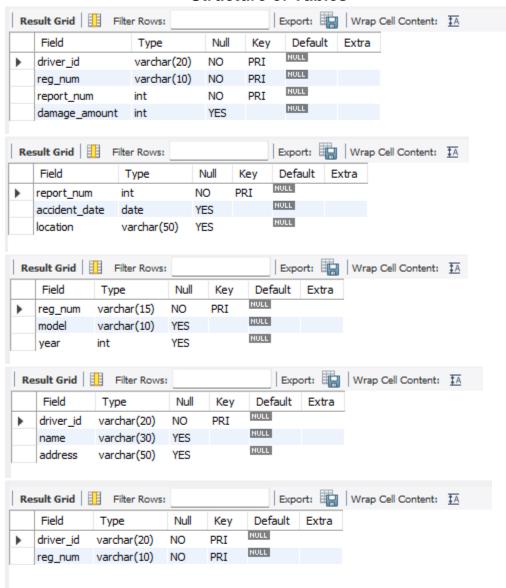

create database insurance; use insurance;

### **Creating Tables**

```
create table Person (
driver_id varchar(20),
name varchar(20),
address varchar(30),
primary key(driver_id)
);
create table car
(
reg_num int,
model varchar(20),
```

```
year int,
primary key(reg_num)
);
create table owns
driver_id varchar(20),
reg_num int,
primary key(driver_id,reg_num),
foreign key(driver_id) references Person(driver_id),
foreign key(reg_num) references car(reg_num)
);
create table accident
report_num int,
accident_date date,
location varchar(30),
primary key(report_num)
);
desc accident;
create table participated
driver_id varchar(20),
reg_num int,
report_num int,
damage_amount int,
primary key(driver_id,reg_num,report_num),
foreign key(driver_id) references Person(driver_id),
foreign key(reg_num) references car(reg_num),
foreign key(report_num) references accident(report_num)
);
```

#### **Structure of Tables**

#### **Inserting Values**

insert into Person values("A01","Richard","Srinivas nagar"); insert into Person values("A02","Pradeep","Rajaji nagar"); insert into Person values("A03","Smith","Ashok nagar"); insert into Person values("A04","Venu","N R Colony ");

```
insert into Person values("A05","Jhon","Hanumanth nagar");
insert into car values(052250,"Indica",1990);
insert into car values(031181,"Lancer",1957);
insert into car values(095477, "Toyota", 1998);
insert into car values(053408, "Honda", 2008);
insert into car values(041702, "Audi", 2008);
insert into owns values("A01",052250);
insert into owns values("A02",031181);
insert into owns values("A03",095477);
insert into owns values("A04",053408);
insert into owns values("A05",041702);
insert into accident values(11,'2003-01-01','Mysore road');
insert into accident values(12,'2004-02-02','South end circle');
insert into accident values(13,'2003-01-21','Bull temple end');
insert into accident values(14,'2008-02-17','Mysore road');
insert into accident values(15,'2004-03-05','Kanakapura road');
insert into participated values('A01','052250',11,10000);
insert into participated values('A02','053408',12,50000);
insert into participated values('A03','095477',13,25000);
insert into participated values('A04','031181',14,3000);
insert into participated values('A05','041702',15,5000);
select * from Person;
```

١	A01	52250	11	10000
	A02	53408	12	25000
	A03	95477	13	25000
	A04	31181	14	3000
	A05	41702	15	5000
	NULL	NULL	NULL	NULL

#### **Queries**

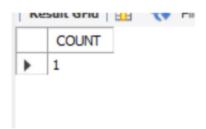

1. Update the damage amount to 25000 for the car with a specific reg-num (example '053408') for which the accident report number was 12

update participated set damage\_amount=25000 where reg\_num='053408' and report\_num=12;

2. Find the total number of people who owned cars that were involved in accidents in 2008.

select count(distinct driver\_id) COUNT from participated a, accident b

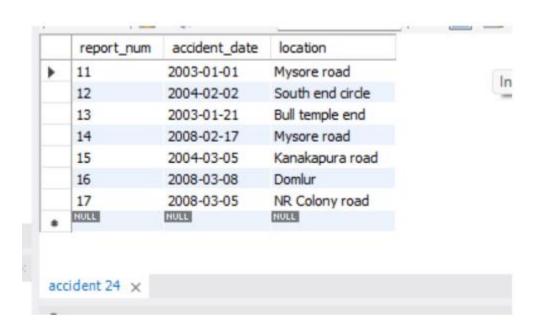

where a.report\_num=b.report\_num and b.accident\_date like '%08%';

3.Add a new accident to the database.

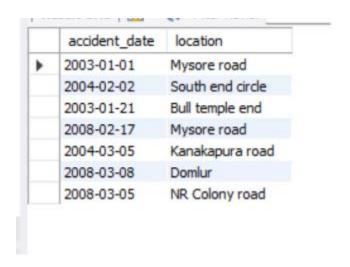

insert into accident values(16,'2008-03-08',"Domlur");

select \* from accident;

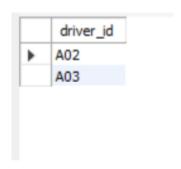

4. Display Accident date and location

select accident\_date, location from accident;

5.Display driver id who did accident with damage amount greater than or equal to Rs.25000

select driver\_id from participated where damage\_amount>=25000;

#### 2.More Queries on Insurance Database

1. Display the entire CAR relation in the ascending order of manufacturing year.

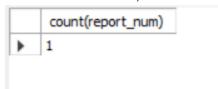

select \* from car order by year asc;

	reg_num	model	year
•	031181	Lancer	1957
	052250	Indica	1990
	095477	Toyota	1998
	041702	Audi	2005
	053408	Honda	2008
	NULL	NULL	NULL

2. Find the number of accidents in which cars belonging to a specific model (example 'Lancer') were involved.

select count(report\_num) from car c, participated p where c.reg\_num=p.reg\_num and

c.model='Lancer';

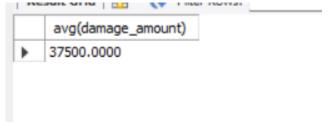

3.LIST THE ENTIRE PARTICIPATED RELATION IN THE DESCENDING ORDER OF DAMAGE AMOUNT.

select \* from participated order by damage\_amount desc;

	driver_id	reg_num	report_num	damage_amount
•	A02	031181	12	50000
	A03	095477	13	25000
	NULL	NULL	NULL	NULL

#### 4.FIND THE AVERAGE DAMAGE AMOUNT

select avg(damage\_amount) from participated;

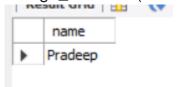

## 5.DELETE THE TUPLE WHOSE DAMAGE AMOUNT IS BELOW THE AVERAGE DAMAGE AMOUNT

delete from participated
where damage\_amount < (select p.damage\_amount from(select
avg(damage\_amount) as
damage\_amount from participated) p);</pre>

6.LIST THE NAME OF DRIVERS WHOSE DAMAGE IS GREATER THAN THE AVERAGE DAMAGE AMOUNT.

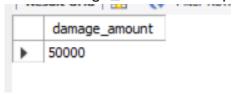

select name from person,participated where person.driver\_id=participated.driver\_id and

damage\_amount>(select avg(damage\_amount) from participated);

#### 7.FIND MAXIMUM DAMAGE AMOUNT.

select damage\_amount from participated having max(damage\_amount);

#### 3.Bank Database

Branch (branch-name: String, branch-city: String, assets: real)

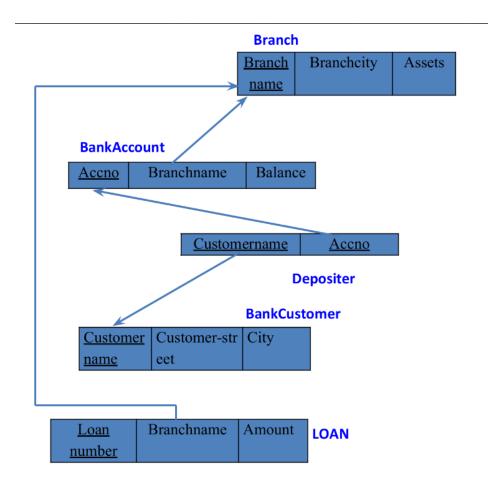

BankAccount(accno: int, branch-name: String, balance: real)

BankCustomer (customer-name: String, customer-street: String,

customer-city: String)

Depositer(customer-name: String, accno: int)

LOAN (loan-number: int, branch-name: String, amount: real)

#### **Creating Database**

create database bank; use bank;

#### **Creating Tables**

create table branch

(branchname varchar(50), branchcity varchar(50), assets int, primary key(branchname));

create table bankaccount

( accno int, branchname varchar(50), balance int, primary key(accno),

foreign key(branchname) references branch(branchname));

create table bankcustomer

(customername varchar(50), customerstreet varchar(50), city varchar(50), primary key(customername));

create table depositer

( customername varchar(50), accno int,

primary key(accno),

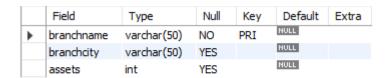

foreign key(accno) references bankaccount(accno),

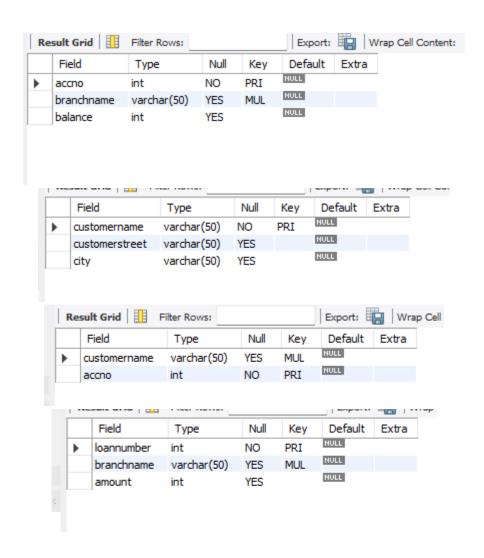

foreign key(customername) references bankcustomer(customername));

create table loan

(loannumber int, branchname varchar(50), amount int, foreign key(branchname) references branch(branchname));

#### Structure of Tables

#### **Inserting Values**

insert into branch values("SBI\_Chamrajpet","Banglore",50000); insert into branch values("SBI\_ResidencyRoad","Banglore",10000); insert into branch values("SBI\_ShivajiRoad","Bombay",20000); insert into branch values("SBI\_ParlimentRoad","Delhi",10000); insert into branch values("SBI\_Jantarmantar","Delhi",20000);

insert into bankaccount values(1,"SBI\_Chamrajpet",2000); insert into bankaccount values(2,"SBI\_ResidencyRoad",5000); insert into bankaccount values(3,"SBI\_ShivajiRoad",6000);

	4	SBI_ParlimentRoad	4000
	5	SBI_Jantarmantar	5000

#### Queries

1. Display the branch name and assets from all branches in lakhs of rupees and rename the assets column to 'assets in lakhs'.

select branchname, assets/100000 as assets\_in\_lakkhs from branch;

	branchname	assets_in_lakkhs
•	SBI_Chamrajpet	0.5000
	SBI_Jantarmantar	0.2000
	SBI_ParlimentRoad	0.1000
	SBI_ResidencyRoad	0.1000
	SBI ShivajiRoad	0.2000

2.Find all the customers who have at least two accounts at the same branch (ex. SBI\_ResidencyRoad).

select d.customername from bankaccount b, depositer d
where b.branchname="SBI\_ResidencyRoad" and b.accno=d.accno
group by d.customername having count(d.accno)>=2;

3.CREATE A VIEW WHICH GIVES EACH BRANCH THE SUM OF THE AMOUNT OF ALL THE LOANS AT THE BRANCH.

create view sum\_of\_loan
as select branchname,sum(balance)
from bankaccount
group by branchname;

select \* from sum\_of\_loan;

	branchname	sum(balance)
•	SBI_Chamrajpet	2000
	SBI_Jantarmantar	10000
	SBI_ParlimentRoad	12000
	SBI_ResidencyRoad	14000
	SBI_ShivajiRoad	10000

#### 4. More Queries on Bank Database

1. Find all the customers who have an account at all the branches located in a specific city (Ex. Delhi).

```
insert into bankaccount values(12,"SBI_MatriMarg",2000);
insert into branch values("SBI_MatriMarg","Delhi",200000);
insert into depositer values("Nikil",12);

create table borrower(customername varchar(50), loannumber int,
foreign key(customername) references
bankcustomer(customername), foreign key(loannumber) references
loan(loannumber));

insert into borrower values("Avinash",1),("Dinesh",2),("Mohan",3),("Nikil",4),("Ravi",5);
```

#### **Queries**

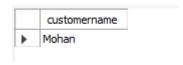

1. Find all the customers who have an account at all the branches located in a specific city (Ex. Delhi).

select d.customername from branch b, depositer d, bankaccount ba where b.branchcity='Delhi' and d.accno=ba.accno and b.branchname=ba.branchname group by d.customername having count(customername)>1;

2. Find all customers who have a loan at the bank but do not have an account. select distinct b.customername from borrower b, depositer d where b. Customername not in (

select d.customername from loan l,depositer d, borrower b where l.loannumber=b.loannumber and d.customername=b.customername);

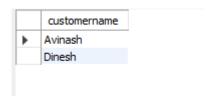

3. Find all customers who have both an account and a loan at the Bangalore branch

select distinct d.customername from depositer d where d.customername in(

select d.customername from branch br,depositer d, bankaccount ba where br.branchcity="Banglore" and

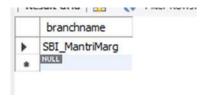

br.branchname=ba.branchname and ba.accno=d.accno and d.customername in(

select customername from borrower));

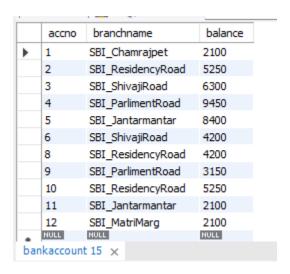

4. Find the names of all branches that have greater assets than all branches located in Bangalore.

select b.branchname from branch b where b.assets> all ( select sum(b.assets) from branch b where b.branchcity='Banglore');

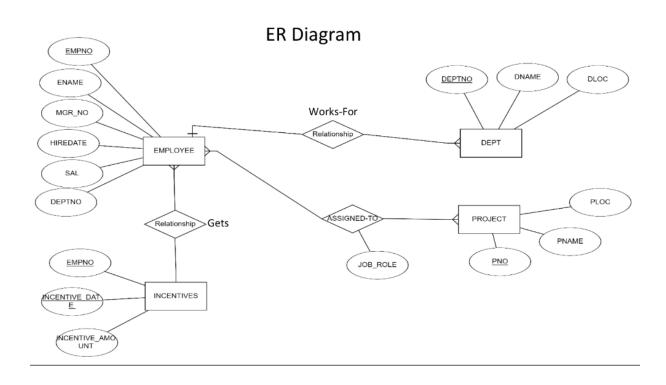

5. Update the Balance of all accounts by 5%

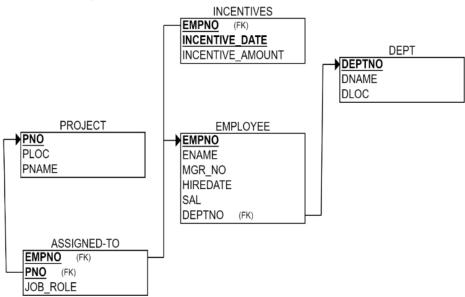

update bankaccount set balance=(balance+(balance\*0.05));
select \* from bankaccount

## **5.Employee Database**

# Schema Diagram

#### **Creating Database**

create database employee; use employee;

#### **Creating Tables**

```
create table dept
( deptno int, dname varchar(50), dloc varchar(50),
primary key(deptno));
create table employee
(empno int, ename varchar(50), mgrno int, hiredate date, sal int,
deptno int, primary key(empno), foreign key(deptno) references
dept(deptno) on update cascade on delete cascade);
create table incentive
( empno int, incentivedate date, incentiveamount int,
primary key(incentivedate),
foreign key(empno) references employee(empno)
on update cascade on delete cascade);
create table project
(pno int, ploc varchar(50), pname varchar(50),
primary key(pno));
```

create table assignedto

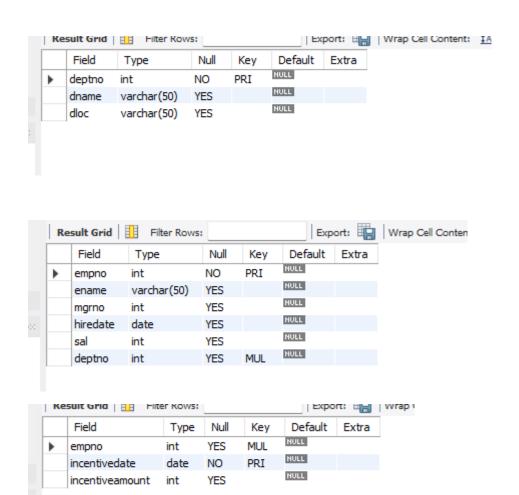

(empno int, pno int, jobrole varchar(50),

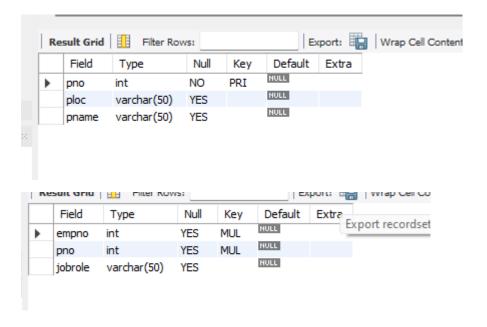

foreign key(empno) references employee(empno),

foreign key(pno) references project(pno)

on update cascade on delete cascade);

#### Structure of Tables

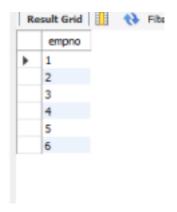

#### **Inserting Values**

```
insert into dept values(1,"Admin","Banglore"), (2,"Sales","Bangolre"), (3,"Finance","Hyderbad"), (4,"Marketing","Mysore"), (5,"Shipping","Hyderbad"); insert into dept values(6,"Purchasing","Mysore"); insert into employee values(1,"Avinash",3,"2000-02-14",25000,1), (2,"Balaji",3,"1999-05-11",31000,3), (3,"Dinesh",NULL,"1992-01-26",46000,2), (4,"Chandan",3,"2001-05-21",28000,4), (5,"Aravind",2,"1998-09-22",17000,5);
```

```
insert into employee values(6,"Amal",3,"2003-02-14",25000,6);
insert into incentive values(1,"2005-03-
23",5000), (3,"2001-08-23",50000),
(5,"2011-04-02",1500);
insert into project
values(11, "Banglore", "Documentation"),
(12,"Banglore","Selling"),
(13,"Hyderbad","Accounting"),
(14,"Mysore","Advertising"),
(15,"Hyderbad","Transportation");
insert into project
values(16,"Mysore","Purchasing"); insert into
project values(17,"Hubli","Presentatiom");
insert into assignedto
values(1,11,"Administration"),
(2,12,"Salesman"),
(3,13,"Accounts"),
(4,14,"Advertising"),
(5,15,"Transporting");
insert into assigned to values (6,16,"Purchasing");
```

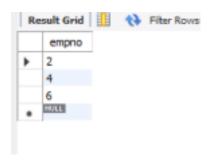

1.Retrieve the employee numbers of all employees who work on project located in Banglore, Hyderbad, or Mysore

select empno from assignedto e where e.pno=any(select p.pno from project p where ploc="Banglore" or ploc="Hyderbad" or ploc="Mysore");

2.Get Employee ID's of those employees who didn't receive incentives

select e.empno from employee e where e.empno not in (select i.empno from incentive i);

3. Write a SQL query to find the employees name, number, dept,

job\_role, department location and project location who are working for a project location same as his/her department location.

select e.ename ename, e.empno empno, d.dname dname, a.jobrole jobrole, d.dloc dloc, p.ploc ploc

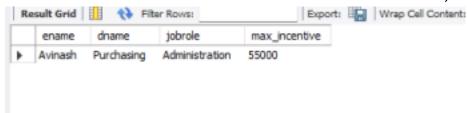

from project p, dept d, employee e, assignedto a

where e.empno=a.empno and p.pno=a.pno and e.deptno=d.deptno and p.ploc=d.dloc;

4. Find the employee name, dept name and job\_role of an employee who received max incentive in year 2005

select e.ename, d.dname, a.jobrole, max(i.incentiveamount) max\_incentive from employee e, dept d, incentive i, assigned to a where incentivedate between "2005-01-01" and "2005-12-31";

### **6.More Queries on Employee Database**

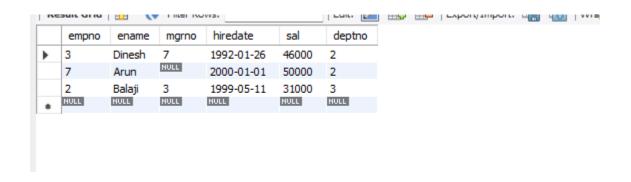

1.List the name of the managers with the maximum employees select e.ename from employee e,employee f

```
where e.empno=f.mgrno
group by e.empno
having count(*)=(select max(mycount)
from
(select count(*) mycount
from employee
group by mgrno) a);
```

2. Display those managers name whose salary is more than average salary of his employee.

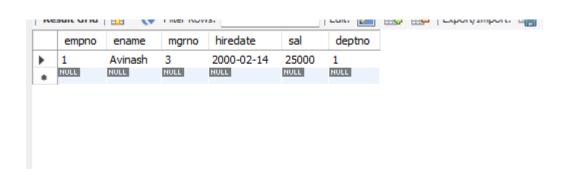

```
select *
from employee m
where m.empno in
(select mgrno
from employee)
and m.sal>(select avg(n.sal)
from employee n
where n.mgrno=m.empno);
```

3. Find the employee details who got second maximum incentive in 2005.

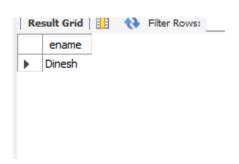

```
select * from employee where empno=
(select iii.empno from incentive iii
where iii.incentiveamount=
(select max(ii.incentiveamount) from incentive ii
where ii.incentiveamount<(select max(i.incentiveamount) from
incentive i where i.incentivedate between "2005-01-01" and "2005-12-
31")
```

and incentivedate between "2005-01-01" and "2005-12-31"));

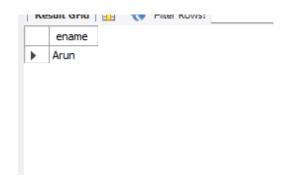

4. Display those employees who are working in the same department where his manager is working.

select e.ename from employee e
where e.deptno=(select f.deptno from employee f
where e.mgrno=f.empno);

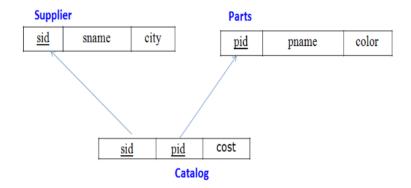

5. Find the name of the second top level managers of each department.

select ename from employee where empno in(select distinct mgrno from employee where empno in (select distinct mgrno from employee where empno in(select distinct mgrno from employee)));

# 7. Supplier Database

# Schema Diagram

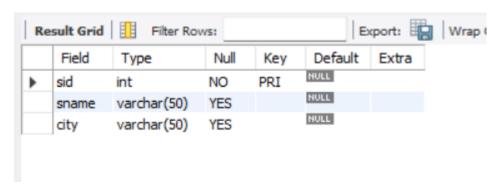

# **Creating Tables**

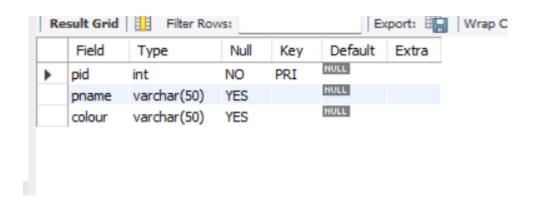

create table supplier (sid int, sname varchar(50), city varchar(50), primary key(sid));

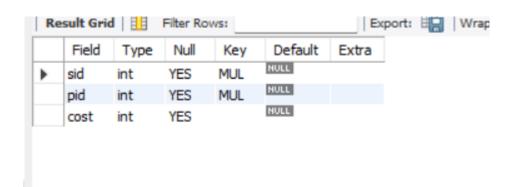

create table parts (pid int, pname varchar(50), colour varchar(50), primary key(pid));

create table
catalog (sid int,
pid int, cost int,
foreign key(sid) references
supplier(sid), foreign key(pid)
references parts(pid));

#### **Structure of Tables**

# **Inserting values**

insert into supplier values(10001, 'acme widget', 'bangalore'),(10002, 'johns', 'kolkata'),(10003, 'vimal', 'mumbai'),(10004, 'reli ance', 'delhi');

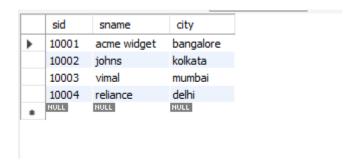

## insert into parts

values(20001,'book','red'),(20002,'pen','red'),(20003,'pencil','green'),(20004,'mobile','green'),(200 05,'charger','black');

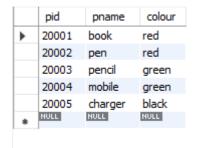

# insert into catalog

values(10001,20001,10),(10001,20002,10),(10001,20003,30),(10001,20004,10),(10001,20005, 10),(10002,20001,10),(10002,20002,20); insert into catalog values(10003,20003,30),(10004,20003,40);

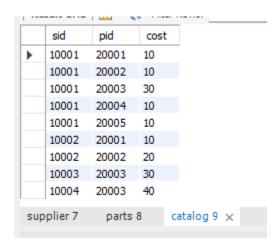

# select \* from supplier;

# select \* from parts;

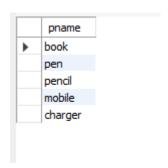

select \* from catalog;

#### **Queries**

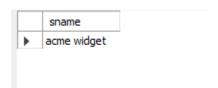

1. Find the pnames of parts for which there is some supplier.

select pname from parts where pid in (select pid from catalog);

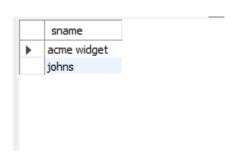

2. Find the snames of suppliers who supply every part.

select sname from (select c.sname,count(distinct a.pid) as cnt from catalog a left join parts b on a.pid=b.pid left join supplier c on c.sid=a.sid group by 1) a where cnt=(select count(distinct a.pid) from catalog a left join parts b on a.pid=b.pid);

3. Find the snames of suppliers who supply every red part.

select sname from supplier where sid in( select sid from catalog where pid in( select pid from parts where colour='red'));

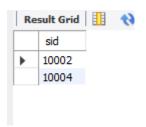

4. Find the pnames of parts supplied by Acme Widget Suppliers and by no one else.

select pname from parts where pid in( select pid from catalog where sid in( select sid from supplier where sname='acme widget')) and pid not in( select pid from catalog where sid in( select sid from supplier where sname!='acme widget'));

5. Find the sids of suppliers who charge more for some part than the average cost of that part

select c.sid from catalog c where c.cost >(select avg(cc.cost) from catalog cc where c.pid=cc.pid group by cc.pid);

6. For each part, find the sname of the supplier who charges the most for that part.

select sname from supplier where sid in( select sid from catalog where cost in( select max(cost) from catalog group by pid));

# 8:Flight Database

FLIGHTS(flno: integer, from: string, to: string, distance: integer, departs: time,

arrives: time, price: integer)

AIRCRAFT(aid: integer, aname: string, cruising\_range: integer)

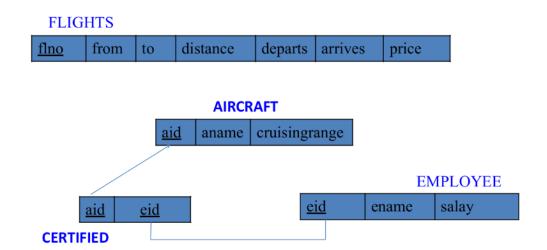

CERTIFIED(eid: integer, aid: integer)

EMPLOYEES(eid: integer, ename: string, salary: integer)

Note that the Employees relation describes pilots and other kinds of employees as well; Every

pilot is certified for some aircraft, and only pilots are certified to fly.

Create database table and insert appropriate data

## **Creating Database**

create database Airline; use Airline;

## **Creating Tables**

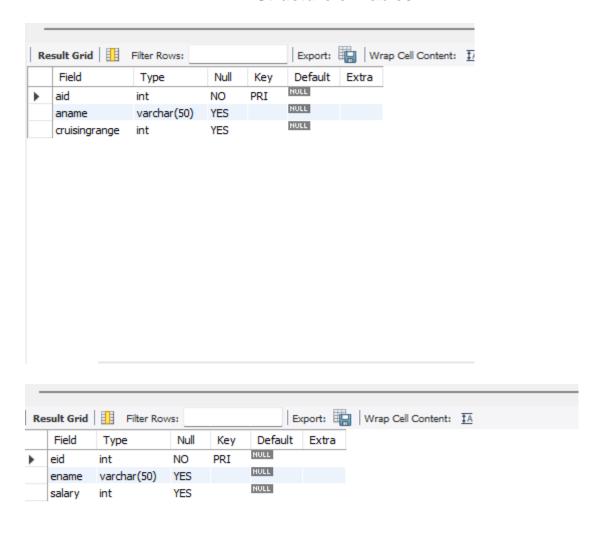

create table flights (flno int, ffrom varchar(50), tto varchar(50), distance int, departs time, arrives time, price int, primary key(flno));

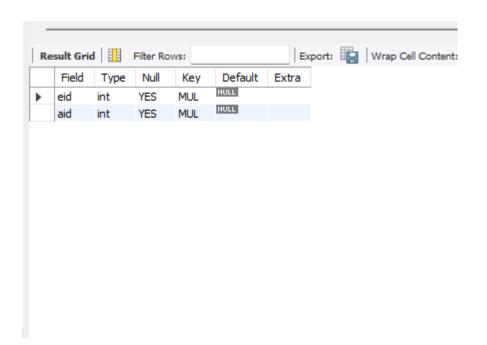

create table aircraft( aid int, aname varchar(50), cruisingrange int, primary key(aid));

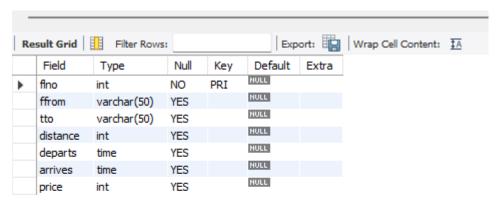

create table
certified( eid
int,aid int,
foreign key(aid) references
aircraft(aid) on update cascade
on delete cascade, foreign
key(eid) references
employee(eid) on update
cascade on delete cascade);

create table employee( eid int, ename varchar(50), salary int, primary key(eid));

#### **Structure of Tables**

Result 4 ×

#### **Inserting Values**

#### insert into employee

values(101,'Avinash',50000),(102,'Lokesh',60000),(103,'Rakesh',70000),(104,'S anthosh',82000), (105,'Tilak',5000);

#### insert into aircraft

values(1,'Airbus',2000),(2,'Boeing',700),(3,'JetAirways',550),(4,'Indigo',5000), (5,'Boeing',4500),(6,'Airbus',2200);

#### insert into certified

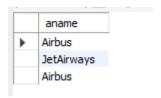

values(101,2),(101,4),(101,5),(101,6),(102,1),(102,3),(102,5),(103,2),(103,3),(103,5),(103,6),(104,1),(104,3),(105,3);

insert into flights values (1,'Banglore','New Delhi',500,'6:00','9:00',5000), (2,'Banglore','Chennai',300,'7:00','8:30',3000), (3,'Trivandrum','New Delhi',800,'8:00','11:30',6000),(4,'Banglore','Frankfurt',10000,'6:00','23:30',50000), (5,'Kolkata','New Delhi',2400,'11:00','3:30',9000), (6,'Banglore','Frankfurt',8000,'9:00','23:00',40000);

#### Queries

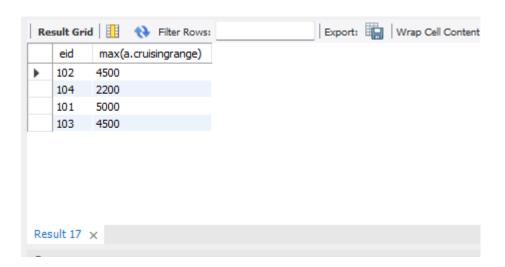

1. Find the names of aircraft such that all pilots certified to operate them have salaries more than Rs. 80,000.

select a.aname from aircraft a where a.aid in(select c.aid from certified c where c.eid in(select e.eid from employee e where salary>80000));

2. For each pilot who is certified for more than three aircrafts, find the eid and the maximum cruising range of the aircraft for which she or he is certified.

select c.eid,max(a.cruisingrange) from certified c,aircraft a where c.aid=a.aid group by c.eid having count(\*)>=3;

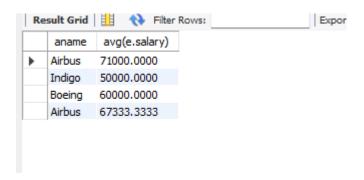

3. Find the names of pilots whose salary is less than the price of the cheapest route from Bengaluru to Frankfurt.

select e.ename from employee e where e.salary<(select min(f.price) from flights f where f.ffrom='Banglore' and f.tto='Frankfurt');

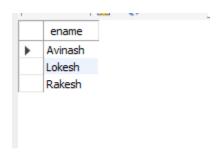

4. For all aircraft with cruising range over 1000 Kms, find the name of the aircraft and the Average salary of all pilots certified for this aircraft.

select a.aname,avg(e.salary) from aircraft a,employee e,certified c where a.aid=c.aid and e.eid=c.eid and a.cruisingrange>1000 group by c.aid;

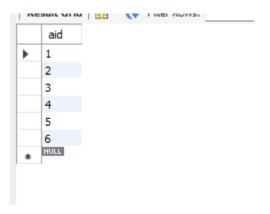

5. Find the names of pilots certified for some Boeing aircraft.

select e.ename from employee e where e.eid in (select c.eid from certified c where c.aid in (select a.aid from aircraft a where a.aname='Boeing'));

6. Find the aids of all aircraft that can be used on routes from Bengaluru to New Delhi.

select a.aid from aircraft a where a.cruisingrange>(select distance from flights where ffrom='Banglore' and tto='New Delhi');

#### **NOSQL**

#### Question

1. Create a database "Student" with the following attributes

Rollno, Age, ContactNo, Email-Id.

>>db.createColletion("Student");

```
Atlas atlas-f5xs60-shard-0 [primary] myFirstDatabase> db.createCollection("student")
.{ ok: 1 }
```

2. Insert appropriate values

```
db.Student.insert({RollNo:1,Age:21,Cont:9876,email:"antara.de9@gmail.com"});
db.Student.insert({RollNo:2,Age:22,Cont:9976,email:"anushka.de9@gmail.com"});
db.Student.insert({RollNo:3,Age:21,Cont:5576,email:"anubhav.de9@gmail.com"});
db.Student.insert({RollNo:4,Age:20,Cont:4476,email:"pani.de9@gmail.com"});
db.Student.insert({RollNo:10,Age:23,Cont:2276,email:"rekha.de9@gmail.com"});
db.Student.insert({RollNo:11,Age:22,Name:"ABC",Cont:2276,email:"rea.de9@gmail.com"});
```

# Queries

3)Write query to update Email-Id of a student with roll no 10.

>>db.Student.update({RollNo:10},{\$set:{email:"Abhinav@gmail.com"}})

```
{
  acknowledged: true,
  insertedId: null,
  matchedCount: 1,
  modifiedCount: 1,
  upsertedCount: 0
}
```

4) Replace the student name from "ABC" to "FEM" of roll no 11

>>db.Student.update({RollNo:11,Name:"ABC"},{\$set:{Name: "FEM"}})

```
{
    acknowledged: true,
    insertedId: null,
    matchedCount: 1,
    modifiedCount: 0
}
```

5) Export the created table into local file system

#### mongoexport

mongodb+srv://AmshuGM:amshusmongodb@cluster0.mfnfeys.mongodb.net/myFirstDatabase --collection=Student --out C:\Users\amshu\Desktop\Downloads\output.json

C:\Users\amshu\OneDrive\Deskttop\Downloads\mongodb-database-tools-windows-x86\_64-100.6.1\mongodb-database-tools-windows-x86\_64-100.6.1\bin>mongodexport mongodb+srv://AmshuGMamshusmongodbecituster0.8zvy7r7.mongodb.net/myfirstDatabase --collection=Student --out C:\Users\amshu\OneDrive\Desktop\Downloads\output.json

2023-01-24T20:41:38.798-M6530 connected to: mongodb+srv://[\*\*REDACTED\*\*]@cluster0.8zvy7r7.mongodb.net/myFirstDatabase

2023-01-24T20:41:39.264+0530 exported 6 records

6) Drop the table

>>db.Student.drop();

```
J
Atlas atlas-f5xs60-shard-0 [primary] myFirstDatabase> db.student.drop()
<mark>true</mark>
```

7) Import a given csv dataset from local file system into mongodb collection.

#### >>mongoimport

mongodb+srv://AmshuGM:amshusmongodb@cluster0.mfnfeys.mongodb.net/myFirstDatabase --collection=nStudent --type json --file C:\Users\amshu\Desktop\Downloads\output.json

:\Users\amshu\OneDrive\Desktop\Downloads\mongodb-database-tools-windows-x86\_64-100.6.1\mongodb-database-tools-windows-x86\_64-100.6.1\bin>mongodberv://AmshuGMamshusmongodb@cluster0.8zvy7r7.mongodb.net/myFirstDatabase --collection=nStudent --type json --file C:\Users\amshuOneDrive\Desktop\Downloads\output.json
1023-01-24T20:43:49.032+0530 connected to: mongodb-srv://\*\*REDACTED\*\*]@cluster0.8zvy7r7.mongodb.net/myFirstDatabase
1023-01-24T20:43:49.032+0530 6 document(s) imported successfully. 0 document(s) failed to import.

#### **WEEK 10**

1. Create a collection by name Customers with the following attributes.

```
Cust_id, Acc_Bal, Acc_Type
>>db.createCollection("customer")
```

2. Insert at least 5 values into the table

```
>>db.customer.insert({cust_id:1,acc_bal=12000,acc_type="savings"})
>>db.customer.insert({cust_id:2,acc_bal=500,acc_type="z"})
>>db.customer.insert({cust_id:3,acc_bal=12000,acc_type="z"})
>>db.customer.insert({cust_id:1,acc_bal=12000,acc_type="current"})
>>db.customer.insert({cust_id:2,acc_bal=12000,acc_type="x"})
>>db.customer.insert({cust_id:3,acc_bal=12000,acc_type="x"})
>>db.customer.insert({cust_id:3,acc_bal=12000,acc_type="savings"})
```

```
Atlas atlas-krromp-shard-0 [primary] myFirstDatabase> db.customer.insert({cust_id:1,acc_bal:25000,acc_type:"savings"})
DeprecationNarning: Collection.insert() is deprecated. Use insertOne, insertMany, or bulkWrite.

{
    acknowledged: true,
    insertedIds: { '0': ObjectId("63cf5addc454e13f7dc205f0") }
}
Atlas atlas-krromp-shard-0 [primary] myFirstDatabase> db.customer.insert({cust_id:2,acc_bal:45000,acc_type:"z"})
{
    acknowledged: true,
    insertedIds: { '0': ObjectId("63cf5afbc454e13f7dc205f1") }
}
Atlas atlas-krromp-shard-0 [primary] myFirstDatabase> db.customer.insert({cust_id:3,acc_bal:5000,acc_type:"x"})
{
    acknowledged: true,
    insertedIds: { '0': ObjectId("63cf5b0dc454e13f7dc205f2") }
}
Atlas atlas-krromp-shard-0 [primary] myFirstDatabase> db.customer.insert({cust_id:1,acc_bal:500,acc_type:"current"})
{
    acknowledged: true,
    insertedIds: { '0': ObjectId("63cf5b2ec454e13f7dc205f3") }
}
Atlas atlas-krromp-shard-0 [primary] myFirstDatabase> db.customer.insert({cust_id:2,acc_bal:500,acc_type:"current"})
{
    acknowledged: true,
    insertedIds: { '0': ObjectId("63cf5b62c454e13f7dc205f4") }

Atlas atlas-krromp-shard-0 [primary] myFirstDatabase> db.customer.insert({cust_id:2,acc_bal:500,acc_type:"current"})
{
    acknowledged: true,
    insertedIds: { '0': ObjectId("63cf5b62c454e13f7dc205f4") }
```

3. Write a query to display those records whose total account balance is greater than 1200 of account type 'Z' for each customer\_id.

>>db.customer.find({acc\_bal:{\$gte:1200}})

4. Determine Minimum and Maximum account balance for each customer\_id.

```
Atlas atlas-krromp-shard-0 [primary] myFirstDatabase> db.customer.aggregate([{"$group":{"_id":"$cust_id","max":{"$max":"$acc_bal"},"min":{"$min":"$acc_bal"}}}])
[
{ _id: 3, max: 5000, min: 5000 },
{ _id: 2, max: 45000, min: 500 },
{ _id: 1, max: 25000, min: 500 }
]
```

5. Export the created collection into local file system

#### >> mongoexport

 $mongodb+srv://AmshuGM:amshusmongodb@cluster0.mfnfeys.mongodb.net/myFirstDatabase--collection=customer--out C:\Users\amshu\Desktop\Downloads\output.json$ 

```
C:\Users\Admin\Downloads\mongodb-database-tools-windows-x86_64-100.6.1\mongodb-database-tools-windows-x86_64-100.6.1\mongodb-srv://amshugm:iamatatlas@cluster0.v2lzuog.mongodb.net/myfirstOatabase --collection=customer --o
tec\:\users\admin\desktop\outputt0.json
2823-01-24119:41:01.06440530 exported 5 records
exported 5 records
exported 5 records
```

6. Drop the table

>>db.customer.drop()

# 7. Import a given csv dataset from local file system into mongodb collection.

#### >> mongoimport

 $mongodb+srv://AmshuGM:amshusmongodb@cluster0.mfnfeys.mongodb.net/myFirstDatabase-collection=ncustomer--type json--file C:\Users\amshu\Desktop\Downloads\output.json$
